

Ostend (BE) | RENTEL NV reports first shipment of the components to Ostend

Two blade sets and six top towers are the first components that have been shipped with the Rotra Mare from Esbjerg to Ostend. In the coming weeks more components will follow from Aalborg (blades), Esbjerg (blades and towers), Cuxhaven (nacelles) and Vietnam (towers), to create a stock of components of maximum 12 nacelles, 36 tower parts and 36 blades.

Work is progressing well on the REBO Site where everything is being arranged for the load-in of components via the RORO ramp, the pre-assembly of the wind turbine components and for load-out of the wind turbine components on the Installation Vessel.
